

DAMON[™]SYSTEM More than straight teeth[™]

The Damon System is not just a new product, it's a whole new way of treating patients. Conventional treatment often requires removal of healthy teeth and/or the use of palatal expanders to make space. This approach is often uncomfortable, takes longer, and can leave a narrower arch and a flat profile. Damon smiles are full, natural 10-tooth smiles achieved with light biologically-sensible forces, and are specifically designed to improve the overall facial result of each patient.

Braces are the beginning, but the system makes the smile.

Certified Damon System doctors combine three key components, which when used together, deliver faster treatment, fewer appointments, greater comfort, and consistent high-quality results:

- 1. Damon passive self-ligating braces** that eliminate the need for elastic or metal "ties". With Damon tie-less braces you can experience treatment without tightening.
- 2. Light high-technology shape-memory wires** that move teeth faster and require fewer adjustments.
- 3. A new clinically proven treatment approach** that aligns your teeth and enhances your facial aesthetics - usually without extractions or rapid palatal expanders.

Conventional braces on the left are tied in with elastics, which cause friction and pressure, making treatment slower and less comfortable. Damon braces use a slide mechanism to hold the wire, which allows teeth to move more freely, quickly and comfortably.

Damon braces are designed to be discreet, comfortable and easy to keep clean. Without the elastic ties which attract and collect plaque, Damon braces make dental hygiene easy during treatment.
